Protection protects and deters automotive theft better than competing products.

Right. The Viperlock will protect a vehicle from theft even if the steering wheel has been cut.

For the ultimate in steering wheel lock and security...

insist on the revolutionary ViperLock™, high security steering wheel lock. The patented ViperLock™ is virtually impossible to defeat. While other steering wheel locks are susceptible to lock picking or can be removed by simply cutting the steering wheel in multiple places, the ViperLock™ is impervious to such attacks. It features dual steel lock hooks and aluminum housing which makes it impossible to remove, even when the steering wheel is cut in multiple places.

The ViperLock™ is simple to install...

and locks into place without a key. The 14mm hexagon shaped hardened steel shaft resists cutting and withstands common Freon attacks used by thieves. The ViperLock™ also includes the patented pickproof Pagoda® lock design that resists drilling and punching. The ViperLock™ is constructed of heavy duty metal, but is more compact in size and easier to store than other less effective steering wheel locks on the market.

ViperLock is available two ways

The ViperLock™ is available with and without the optional Airbag Protection Plate. When used with the ViperLock™, the metal Airbag Protection Plate prevents airbag theft by covering the steering wheel airbag for added security.

Lifetime warranty

Each ViperLock™ comes with a lifetime warranty against defects in workmanship and labor and our insurance deductible reimbursement warranty will provide up to \$1000 reimbursement of insurance deductible if the vehicle is stolen while ViperLock™ is correctly installed.
